eTakeoff

Feature Enabling by Complete Care Expiration

All versions of eTakeoff Dimension use the same executable (software program). This executable is available to anyone via the eTakeoff web site download page. So anyone who wanted the latest version would be able to install it.

When a user upgrades eTakeoff Dimension, new features are enabled if the user had Complete Care through the date the features was released. The table below lists the maintenance-based features, what version of Dimension is required and the feature release date. User's whose maintenance expired before the release date will see the feature disabled, even if they have the required version.
